

Rayan Geotechnics: Introducing a new Rocscience Reseller in Iran

rocscience

We're pleased to welcome **Rayan Geotechnics** as our newest Rocscience Reseller in Tehran, Iran.

Rayan Geotechnics was established by Mohammad Beyk and Sahand Shokri in 2017. Mr. Beyk, a graduate of the University of Tehran's Bachelor's and Master's programs in Mining Exploration, has several years of experience as an administrator in organizing civil and mining engineering conferences and workshops.

Mr. Shokri holds a Bachelor's degree in Mining Exploitation Engineering and a Master's degree in Rock Mechanics from the University of Tehran. The technical strength of Rayan Geotechnics is founded on Mr. Shokri's years of experience as a rock mechanics specialist in civil and mining consulting companies and his work on a variety of projects in Iran, Tajikistan and Armenia. Through his work Mr. Shokri has become familiar with many Rocscience software solutions and he and Mr. Beyk will work closely with customers in Iran to determine tailored software packages to meet local business' needs.

Since beginning their work in Iran, Rayan Geotechnics has introduced the Rocscience Academic Bundle to several universities in Tehran and has garnered interest from clients ranging from mining consultants to civil engineers working on geotechnical projects like roads and dams.
